

Connect AirPods Pro 3 for Windows 11

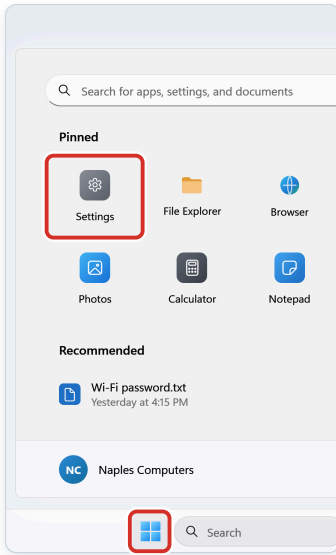

Follow these simple steps to pair your AirPods Pro 3 with a Windows 11 PC.

*We Make
I.T.
Happen!*

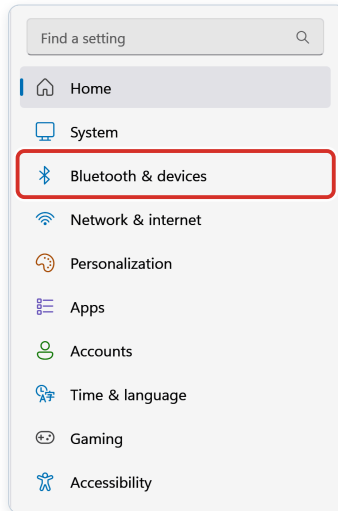

1 Open Settings

Click the **Start** button, then select **Settings**.

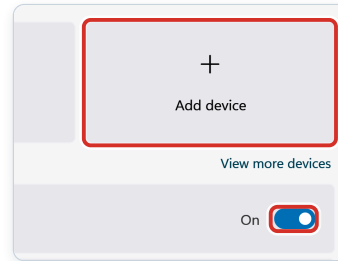

2 Go to Bluetooth & devices

In Settings, click **Bluetooth & devices** on the left.

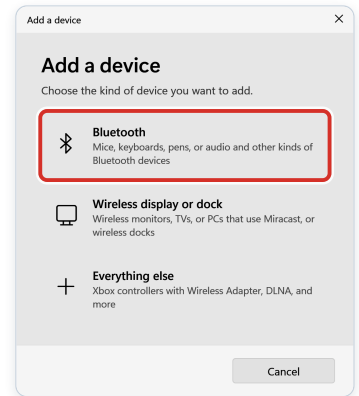

3 Turn on Bluetooth

Make sure **Bluetooth** is **On**, then click **Add device**.

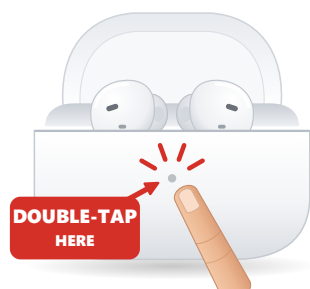

4 Select Bluetooth

In the **Add a device** window, click **Bluetooth**.

5 Put AirPods in Pairing Mode

Put both AirPods in the case and open the lid. **Double-tap the front of the case**, just below the light.

Note: AirPods Pro 3 have no setup button on the back. Use the double-tap.

6 Look for the Flashing Light

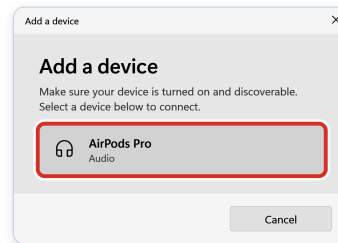

After double-tapping, the status light on the front of the case **flashes white**.

**Flashing white light =
Ready to pair**

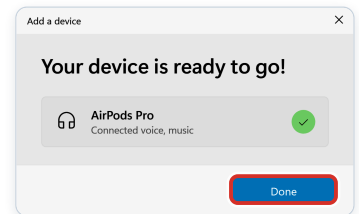

7 Select AirPods Pro

Back on your PC, wait for **AirPods Pro** to appear in the list, then click it.

8 You're Connected!

When Windows says **Your device is ready to go!**, click **Done**.

Good to Know

- Your AirPods **reconnect automatically** to this PC when Bluetooth is on and they're nearby.
- Sound still on the speakers? Click the arrow next to the volume slider in Quick Settings and pick **Headphones (AirPods Pro)**.
- Don't see AirPods Pro? Close the case, wait a few seconds, open it and **double-tap the front** again.
