

Leaving for the Summer? Snowbird Tech Checklist

What to unplug, what to leave on, and how to keep an eye on things from afar.

*We Make
I.T.
Happen!*

1 Leave These On

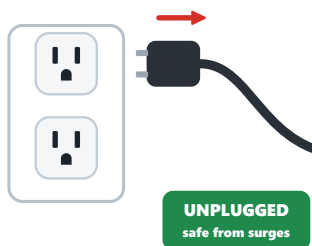

Modem & router, smart thermostat, cameras and **water-leak sensors**.

ROUTER

2 Unplug These

Computers, monitors, TVs, printers and chargers, **from the wall**.

3 Internet on a UPS

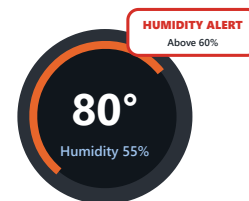

Plug the modem and router into a **battery backup** to ride out short outages.

Test it: batteries last 3–5 years. We carry APC, Tripp Lite & CyberPower.

4 Thermostat & Humidity

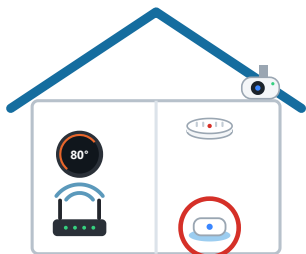

Check it from your phone. EPA: keep indoor humidity **below 60%**.

Ask your A/C company for the right setting.

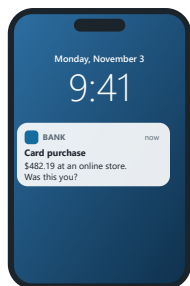

5 Test Cameras & Sensors

Turn off Wi-Fi on your phone and test the apps **over cellular**. Trigger a test alert.

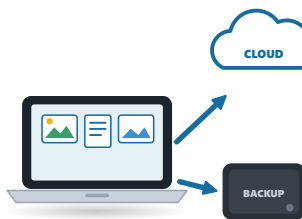

6 Alerts & Remote Access

Turn on **bank & card alerts**. Set up and test **remote access** before you go.

7 Back Up First

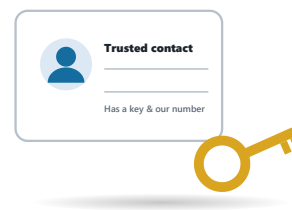

Fresh backup to your **external drive**, and check your **cloud backup**.

Take the drive, or seal it in a waterproof bag up high.

8 A Trusted Contact

Someone local with a **key** who can check after storms and restart the router.

Good to Know

- **Hurricane season** runs June 1 – November 30: raise computers and power strips off the floor before you leave.
- Make sure two-factor codes go to the **phone you're taking**. Go paperless or use USPS mail forwarding.
- We can do **remote check-ins** while you're away. We never cold-call to start a remote session.
