Set Up a UPS Battery Backup

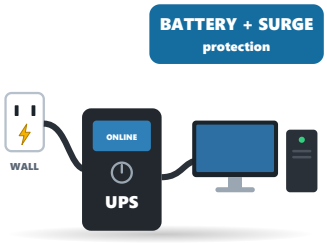

So a power blink doesn't cost you your work.

We Make I.T. Happen!™

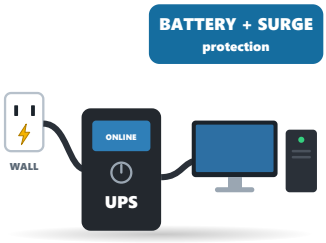

1 Instant Battery Power

When the grid fails, it switches over **immediately**.

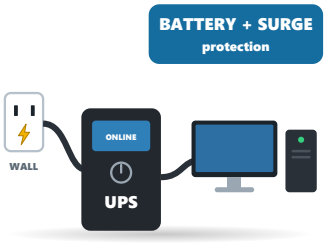

2 Add Up Your Wattage

Look for a UPS with about **20 to 25% more capacity**.

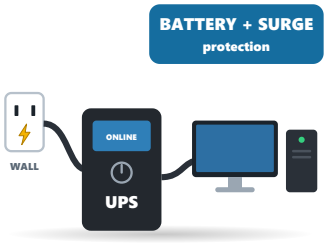

3 650 to 1500 VA for Home Office

APC, CyberPower, and Tripp Lite all make **solid options**.

4 Battery Outlets: the Essentials

Your computer, and your **modem or router**.

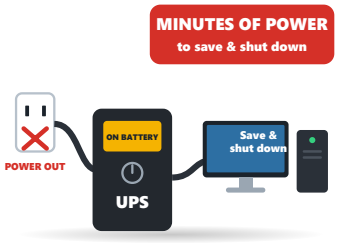

5 Never a Laser Printer on Battery Power

The heating element can **trip the UPS**.

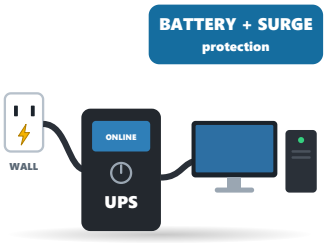

6 During an Outage: Save & Shut Down

You've got minutes, **don't wait it out**.

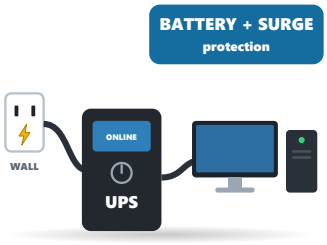

7 Install the Monitoring Software

Connects over USB, can **shut down for you** if you're away.

8 Replace the Battery Every 2 to 5 Years

Test it a couple times a year, **before storm season**.

Good to Know

- A UPS is built for a graceful shutdown, minutes, not hours; that's a generator's job.
- Most units have a self-test button; use it before hurricane season.
- Not sure which one to get? Call **239-513-1960**, we'll help you size it.
