

Connect a New Printer Wi-Fi Setup

Get your new printer online in a few minutes, on Windows 11 or a Mac.

*We Make
I.T.
Happen!™*

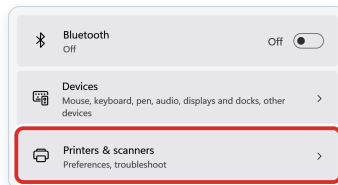

1 Get It on Wi-Fi First

Use the printer's own touchscreen/control panel, or the maker's app (**HP Smart, Canon, Brother**), to join your Wi-Fi.

2 Windows: Open Printers & Scanners

Settings → **Bluetooth & devices** → **Printers & scanners**.

3 Windows: Click Add Device

Under **Add a printer or scanner**, click **Add device**.

4 Windows: Add Your Printer

Windows finds it on the network. Click **Add device** to install it.

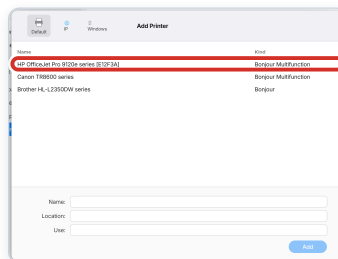

5 Mac: Add Printer, Scanner, or Fax

System Settings → **Printers & Scanners**, then click this button.

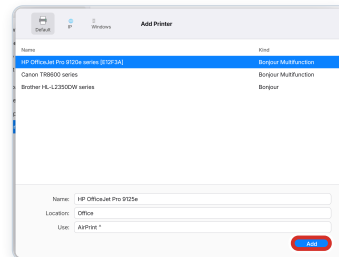

6 Mac: Choose Your Printer

HP, Canon, and Brother models all show up the same way.

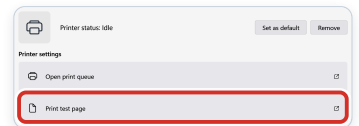

7 Mac: Click Add

Your printer is ready to use.

8 Set as Default, Then Test

On the printer's page, click **Set as default**, then **Print test page**.

Good to Know

- No scanner app needed to add it – AirPrint and Windows' built-in drivers handle most HP, Canon, and Brother printers automatically.
- Not showing up? Make sure the printer and your computer are on the exact same Wi-Fi network, not a guest network.
- Need a hand? We set up home and office printers every week. Call **239-513-1960**.
