

Connect to Wi-Fi on Windows 11

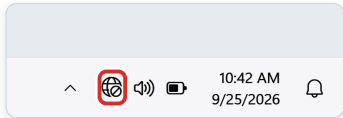

Get your Windows 11 PC online in about a minute. Have your network name and Wi-Fi password ready.

*We Make
I.T.
Happen!*

1 Click the Network Icon

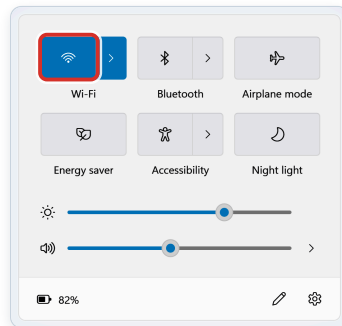

At the bottom-right of the taskbar, next to the clock, click the **network icon**.

Not connected? It looks like a small globe.

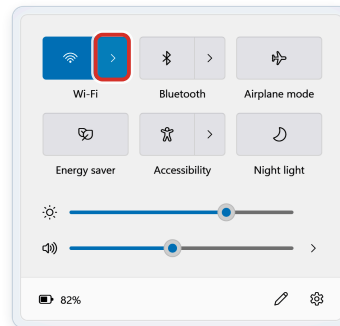

2 Turn Wi-Fi On

If the **Wi-Fi** button is gray, click it so it turns **blue**.

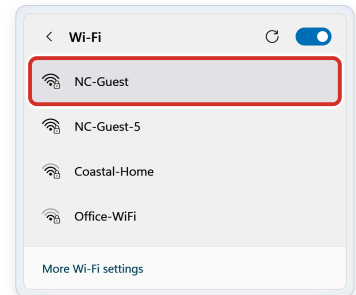

3 Show the Networks

Click the **arrow (>)** next to Wi-Fi to see the networks near you.

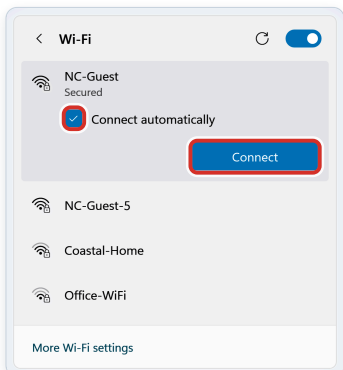

4 Choose Your Network

Click your network's **name** in the list.

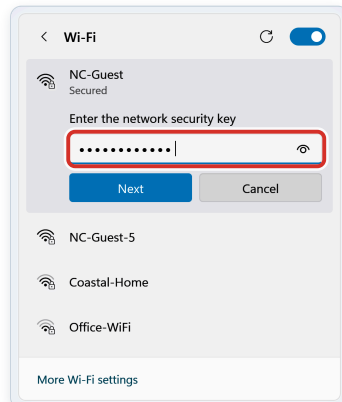

5 Click Connect

Leave **Connect automatically** checked, then click **Connect**.

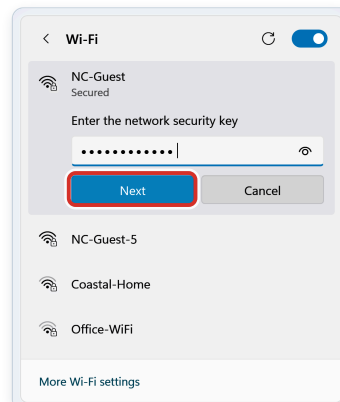

6 Enter the Security Key

Type the **network security key** (your Wi-Fi password). It's case-sensitive.

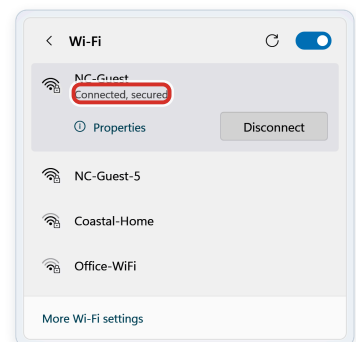

7 Click Next

Click **Next**. Windows checks the key and connects.

8 You're Connected!

Look for **Connected, secured**. The taskbar icon changes to Wi-Fi bars.

Good to Know

- **Other way:** Start → Settings → Network & internet → Wi-Fi → Show available networks.
- Key rejected? Check **Caps Lock**. Can't see your network? Move closer, or restart the router and your PC.
- On public Wi-Fi, only join networks you recognize, and keep it set to **Public network**.
