The Cyber Insurance IT Checklist

What they're actually checking for, before they write a policy.

We Make I.T. Happen!™

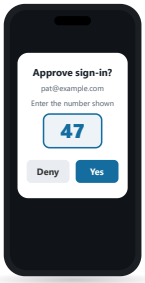

1 Insurers Ask Before They'll Write It

Most applications go through a **real security questionnaire**.

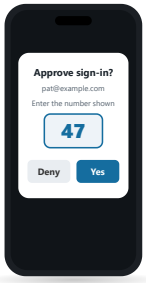

2 A Claim Can Be Denied, Too

If a control wasn't actually in place **when the loss happened**.

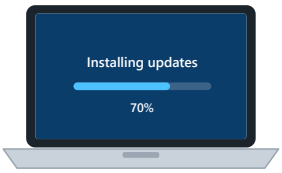

3 The Big Three

MFA, tested backups, and **security awareness training**.

4 Automatic Updates

Every operating system, and the **software on top of it**.

5 Endpoint Protection

Modern malware protection, **not just basic antivirus**.

6 Least-Privilege Access

Nobody has admin rights **they don't need**.

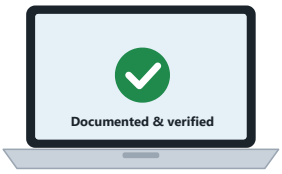

7 A Written, Tested IR Plan

Run through it **at least once a year**.

8 Proof Matters More Than a Checkbox

Keep records that controls are **actually enforced**.

Good to Know

- Don't overstate the application; an inaccurate answer can void coverage exactly when you need it most.
- Review your readiness before every renewal; requirements change as insurers see more claims.
- Ready for your application? Call **239-513-1960**.
