Find Your Model & Serial Number

Windows 11 and Mac, step by step.

We Make I.T. Happen!™

1 Windows 11: Open System

Settings → **System**.

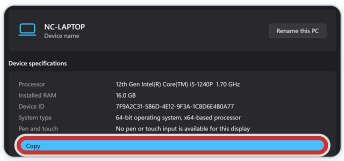

2 Windows 11: Click About

Scroll down the System list and select **About**.

3 Windows 11: Copy Your Specs

The **Copy** button grabs your processor, RAM, and Windows version to paste anywhere.

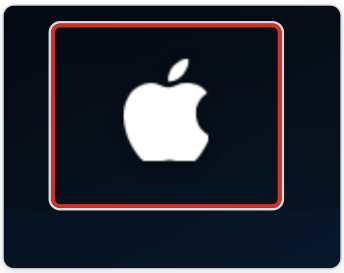

4 Windows 11: No Serial Listed?

Open **System Information** instead for the manufacturer model and serial.

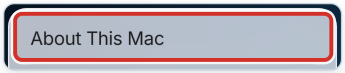

5 Mac: Open the Apple Menu

Click the **Apple logo** in the top-left corner of the screen.

6 Mac: Choose About This Mac

It's the first item in the menu that opens.

7 Mac: Read the Model & Serial

Both are listed right in that window, no digging required.

8 Still Stuck? Check the Label

Many laptops and desktops print the model and serial on a **sticker** on the device itself.

Good to Know

- On a Mac, you can enter the serial number at **checkcoverage.apple.com** to check warranty status.
- Snap a photo of the label before you ever need it — it's easy to lose track of later.
- Still can't find yours? Call **239-513-1960** and we'll help.
