

Old Exchange Server? What to Check

A few signs you're still running your own Exchange server, and why that matters right now.

*We Make
I.T.
Happen!™*

1 A Server in the Closet?

A physical mail server **still running** somewhere in your office is the clearest sign.

2 Outlook Asks for a Server Name

New computers or new hires need a **server address**, not just an email address.

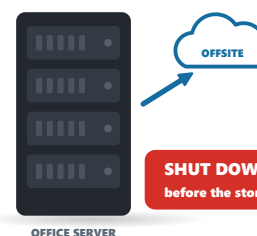

3 Webmail at Your Own Domain

Signing in at your own domain, or a hosting company's page, instead of outlook.com.

4 Support Ended Oct 14, 2025

Microsoft ended support for Exchange Server **2016 and 2019**: no more security updates.

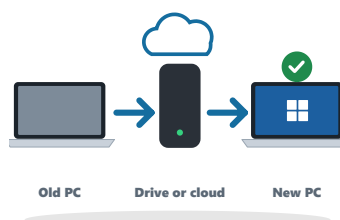

5 A Growing Risk

Unpatched vulnerabilities, compliance questions, and aging hardware with no vendor support.

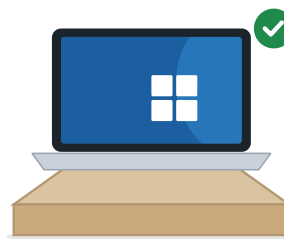

6 How Moving Works

Assessment, a new Microsoft 365 tenant, mail copied over ahead of time, then a **zero-downtime** cutover.

7 Outlook & Phones Afterward

A short, guided step for everyone on the team once the move is complete.

8 Start With an Assessment

Call **239-513-1960** and we'll tell you exactly what moving would involve.

Good to Know

- **Naples Computers is a Microsoft Partner** and has done hundreds of email migrations of every kind.
- Migrations move with **zero downtime**: mail is copied over before the cutover ever happens.
- We add **N-able Mail Assure** spam filtering as part of the move. Not sure what you're running? Call 239-513-1960.
