Make Your Laptop Battery Last Longer

Heat is the real enemy, not everyday use.

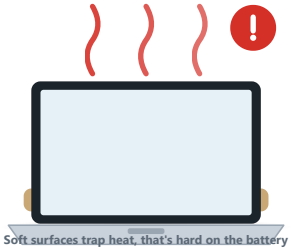

Stay in the green zone when you can

We Make I.T. Happen!™

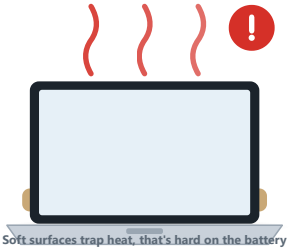

1 Heat, More Than Anything

High temperatures age a battery **faster than normal use**.

Soft surfaces trap heat, that's hard on the battery

2 Use a Hard, Flat Surface

Keep the vents clear, **especially while charging**.

Soft surfaces trap heat, that's hard on the battery

3 Avoid Living at the Extremes

Sitting at 100%, or draining to 0%, adds **extra wear**.

Stay in the green zone when you can

4 A Quick Top-Up Is Fine

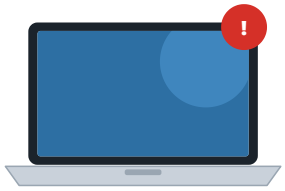

You don't need to baby it, just **avoid the extremes**.

Stay in the green zone when you can

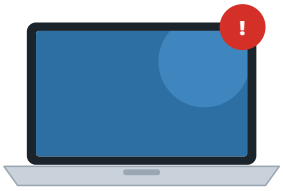

5 Mac: Optimized Battery Charging

System Settings, Battery, it **delays charging past 80%**.

6 Windows: Energy Recommendations

Settings, System, Power & battery, **Energy recommendations**.

7 Check Your Real Battery Health

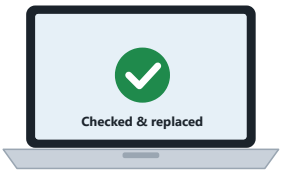

Compare design capacity to **current full-charge capacity**.

Battery Report, or System Information

8 Genuinely Worn Out?

We can **check it, and replace it** if needed.

Good to Know

- Skip the generic "battery cleaner" apps; built-in power management already does this job.
- Windows: run powercfg /batteryreport from an administrator Command Prompt.
- Battery not holding a charge? Call **239-513-1960** to get it checked.
