

Passkeys: What They Are, and How to Start

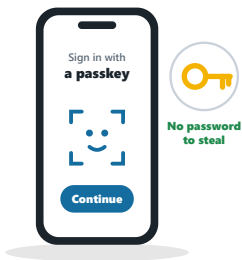

Sign in with your face, fingerprint, or PIN – no password.

*We Make
I.T.
Happen!™*

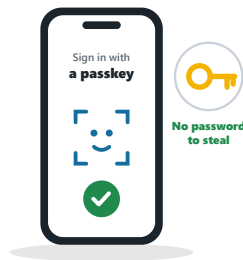

1 What's a Passkey?

Proves it's you with your **face, fingerprint, or PIN** – just like unlocking your phone.

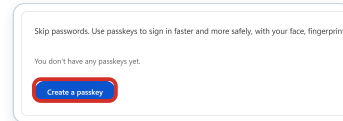

2 Why It's Safer

Can't be phished, and there's **no password** sitting in a database to leak.

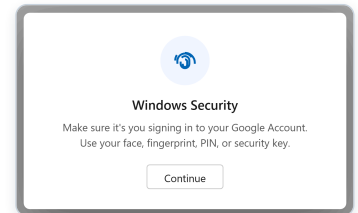

3 Google: Open Passkeys

Security → **Passkeys**, then click **Create a passkey**.

4 Google: Verify It's You

Confirm with your **face, fingerprint, or PIN** when Windows asks.

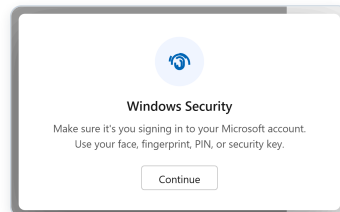

5 Microsoft: Add a New Way

Security → **Add a new way to sign in or verify**.

6 Microsoft: Verify It's You

Choose **Face, fingerprint, PIN, or security key**, then confirm.

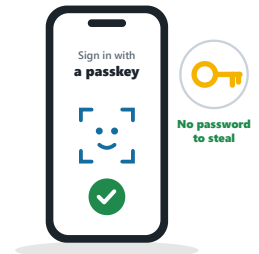

7 It Syncs Across Devices

Set one up on your phone, and it's often **ready on your other devices** too.

8 Only On Your Own Device

Don't create a passkey on a **shared or public computer**.

Good to Know

- Your **password still works** as a backup – you won't be locked out.
- Passkeys use **Windows Hello, Touch ID, or Face ID**, whatever your device already has.
- Want help locking down your accounts? Call **239-513-1960**.
