Secure Remote Work

What actually keeps a remote or hybrid team secure.

We Make I.T. Happen!™

1 Start With the Home Network

Change the router's **default admin password** first.

2 Keep Firmware Updated

Most routers check for updates **right in their app or admin page**.

3 Use the VPN Your IT Provider Set Up

Not a random free app, **connect before opening work files**.

4 A VPN Encrypts the Trip

So it can't be read in between your laptop and company resources.

5 Separate Accounts on Shared Laptops

Keep a **family login separate** from the work account.

6 Turn On Full-Disk Encryption

If it's lost or stolen, **encryption keeps data from walking out the door**.

7 Skip Public Wi-Fi for Work

A coffee shop network is never private, **wait or use the VPN**.

8 Use MFA for Every Work Login

A stolen password alone **shouldn't be enough to get in**.

Good to Know

- Set automatic screen lock on every work laptop, not just a password at startup.
- Review who still has VPN access after someone leaves the team.
- Setting up a remote team? Call **239-513-1960**.
