

Update Windows 11 Check · Install · Restart

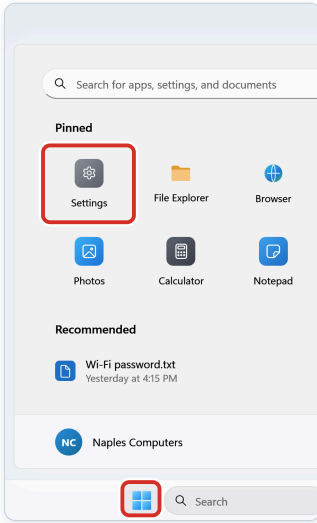

Updates close security holes and fix bugs. Here's how to install them the right way.

*We Make
I.T.
Happen!™*

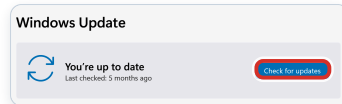

1 Open Settings

Click **Start** → **Settings**, then **Windows Update** at the bottom of the list.

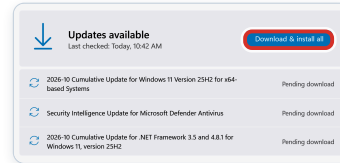

2 Check for Updates

Click **Check for updates**. Windows looks for the latest fixes.

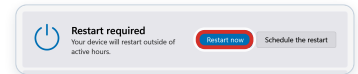

3 Download & Install

If updates are listed, click **Download & install all**. Keep working.

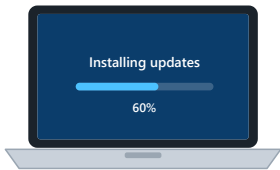

4 Restart Now

Save your work, then click **Restart now**. Keep a laptop **plugged in**.

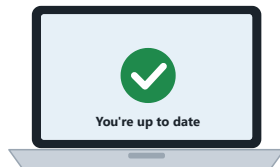

5 Don't Turn It Off

Working on updates can restart more than once. Let it finish.

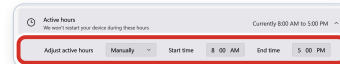

6 Check Again

Back at your desktop? **Check for updates** again until it says **You're up to date**.

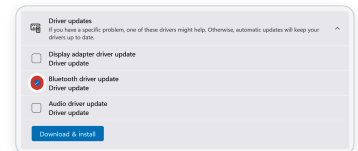

7 Set Active Hours

Advanced options → **Active hours**: no restarts while you work.

8 Optional Updates

Driver updates under **Optional updates**: only for a **specific problem**.

Good to Know

- **Snowbirds**: a computer that sat all summer needs a big batch of updates. Plug in and give it time.
- A pop-up or caller saying you must call to "update" your computer is a **scam**. Real updates come from Windows Update.
- Updates stuck or failing? Call **239-513-1960** or click **Join Remote Session** at naplescomputers.com.
