NAPLES COMPUTERS HOW-TO · SETUP & HOW-TO

Set Up a Guest Wi-Fi Network for Visitors and Renters

Houseguests, tenants, and vacation-rental guests all need Wi-Fi, but they don't need your real password. This guide covers why a separate guest network matters, how to set one up, and how to keep it secure between guests.

Why a separate guest network

Easy for them, invisible to your real network.

Keeps guests off your network
Your files, cameras, and other devices stay out of reach.

Protects you, too
If a guest's activity ever gets traced, it's not tied to your main network.

Easy to reset
Change one password between guests; nothing else on your network changes.

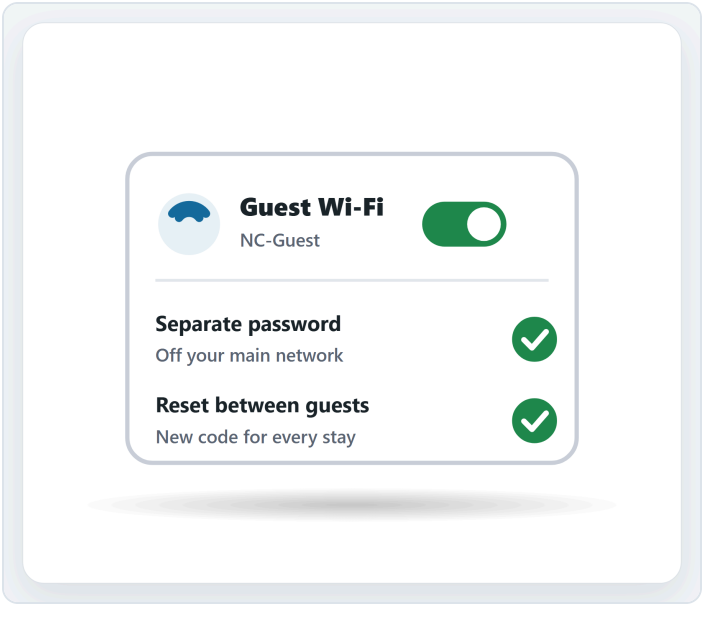

How to set up a guest Wi-Fi network

ALREADY BUILT IN

Most routers already have this

Mesh systems like TP-Link Deco, EnGenius, and Ubiquiti make it a simple toggle in the app.

WHAT TO DO
Turn it on, give it its own name and password, separate from your main Wi-Fi.

BETWEEN GUESTS

Make it easy, and reset it

A QR code makes joining effortless, no typing a password. Change that password after every stay.

WHAT TO DO

A new guest, a new code. It takes a minute, and it keeps the network genuinely separate.

NAPLES COMPUTERS

Setting up a rental property?

We'll set up your guest network, and the whole system, so it's ready for every new guest.

WHAT TO DO

Call 239-513-1960. We work with TP-Link Deco, EnGenius, and Ubiquiti.

A few ground rules

- [ ] **WPA2 or better encryption**
  Never leave the guest network open, with no password at all
- [ ] **Share the password only when it's time**
  For a rental, after the booking is confirmed; for a visit, when they arrive
- [ ] **Mention it's for lawful use only**
  A simple note protects you if it's ever questioned

A couple more things

- [ ] **Keep the router out of reach**
  A locked closet or high shelf, not sitting out where a guest can reset it
- [ ] **Smart devices go on the guest side, too**
  Cameras, locks, and speakers, if they only need internet access
- [ ] **Keep the firmware updated**
  Same router, same rule, whether it's for you or for guests

Recap: guest Wi-Fi network

- [ ] A separate guest network keeps visitors off your real one
- [ ] Most mesh systems make it a simple toggle in the app
- [ ] WPA2 or better, and share the password only when it's time
- [ ] Keep the router out of reach, and the firmware updated
- [ ] Setting up a rental? Call Naples Computers

For a vacation rental, follow Airbnb's own guidance: share the guest Wi-Fi password only after a booking is confirmed, and change it after every stay, so each guest gets a genuinely separate network.
