NAPLES COMPUTERS HOW-TO · PC & MAC BASICS

Silence Spam Calls

This guide shows how to quiet unknown-number and suspected spam calls, using Silence Unknown Callers on iPhone or Caller ID & spam (and Call Screen) on Android, instead of letting every unknown number ring through.

Why it's worth setting up

A quieter phone, without missing the calls that matter.

Fewer interruptions
Calls from numbers you don't know go straight to voicemail instead of ringing.

Real callers can still reach you
Anyone who actually needs you can leave a message.

Set it once
Turn it on a single time, and it keeps working in the background.

Step by step

SILENCE SPAM CALLS

Tired of spam calls?

Both iPhone and Android can quiet unknown numbers before they ever ring.

WHAT TO DO
We're Naples Computers, since 1993.

iPhone: Silence Unknown Callers

- [ ] Open Settings, then Phone
  Where the call options live
- [ ] Turn on Silence Unknown Callers
  Numbers not in your contacts stop ringing
- [ ] Check voicemail and recent calls
  Silenced calls still show up there, they just don't ring

Android: Caller ID & spam

- [ ] Open the Phone app, then Settings
  Look for the spam and caller ID options
- [ ] Turn on Caller ID & spam
  Suspected spam numbers get flagged before you answer
- [ ] Supported phones also offer Call Screen
  An assistant can ask who's calling, before you ever pick up

A few things to know

- [ ] Legitimate calls get silenced too
  Pharmacies, delivery drivers, and callbacks can go straight to voicemail along with the spam
- [ ] Check voicemail now and then
  So nothing important slips past unnoticed
- [ ] This quiets numbers, it doesn't report them
  For a scam call that gets through, still hang up and don't call back

Recap: silence spam calls

- [ ] iPhone: Settings, Phone, then Silence Unknown Callers
- [ ] Android: the Phone app, Settings, then Caller ID & spam
- [ ] Expected calls from unknown numbers get silenced too, not just spam
- [ ] Check voicemail now and then, so nothing important is missed

Check voicemail and recent calls every so often; silencing doesn't delete anything, it just keeps the phone from ringing.

Still getting flooded with spam calls?
