NAPLES COMPUTERS HOW-TO · SECURITY & SAFETY

Turn On MFA for Your Whole Microsoft 365 Company

Most breaches start with one stolen password. This guide covers how to require multifactor authentication for your entire Microsoft 365 organization at once, with Security defaults or Conditional Access, and how to roll it out without catching your team off guard.

Why this is worth doing today

One stolen password shouldn't be enough.

Passwords get stolen
Through phishing, reused passwords, or a data breach you never hear about.

MFA stops it anyway
Even with the password, a stranger still can't get past the second step.

It's often just off
Plenty of small businesses never turned it on for everyone.

Three ways to require it

- [ ] Security defaults
  Free, in every Microsoft 365 organization, the simplest place to start
- [ ] Conditional Access
  More control, needs a Microsoft Entra ID P1 or P2 license
- [ ] Legacy per-user MFA
  Available everywhere, but Microsoft doesn't recommend it anymore

How to turn on MFA for your whole Microsoft 365 company

START HERE

✓ Security defaults: start here

Microsoft Entra admin center, Identity, Overview, Properties tab, Security defaults section.

WHAT TO DO

Tenants created after October 2019 often already have it on. Check first, don't assume.

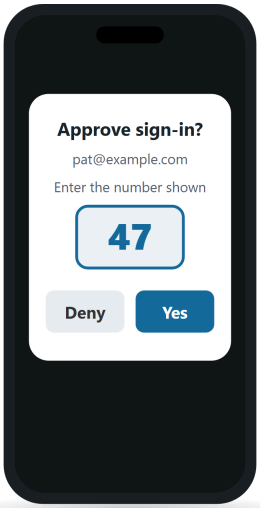

WHAT CHANGES

→ What your team will see

After signing in with their password, they'll approve the sign-in from the Microsoft Authenticator app.

WHAT TO DO

It adds a few seconds. It doesn't slow anyone down in any meaningful way.

NAPLES COMPUTERS

Want us to roll it out for you?

We'll turn it on the right way, with a heads-up to your team, so nobody gets locked out by surprise.

WHAT TO DO

Call 239-513-1960, this is one of the fastest security wins there is.

Rolling it out smoothly

- [ ] Give your team a heads-up first
  A surprise security change generates a lot of confused calls
- [ ] Have everyone install the Authenticator app
  Before you flip the switch, not after
- [ ] Revoke existing sign-in sessions
  So everyone registers for MFA the next time they sign in

Recap: company-wide MFA

- [ ] A stolen password shouldn't be enough to get in
- [ ] Security defaults is free, and the simplest place to start
- [ ] Conditional Access gives more control, if you have the license
- [ ] Give your team a heads-up, and have them install Authenticator first
- [ ] Want it rolled out for you? Call Naples Computers

Before you turn on company-wide MFA, give your team a heads-up and have everyone install the Microsoft Authenticator app first. Then revoke existing sign-in sessions, so everyone registers for MFA the next time they sign in.

Want MFA rolled out for your whole team? We'll handle it.
