Cracked Laptop Screen?

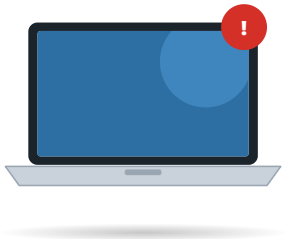

What a screen repair involves.

We Make I.T. Happen!™

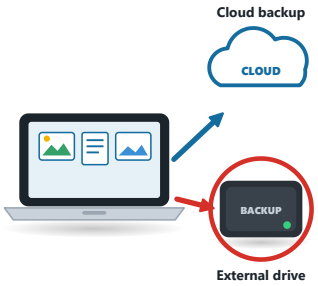

1 Know Your Files Are Usually Safe

A cracked screen is a display problem; the drive underneath usually isn't affected.

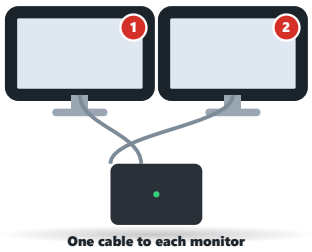

2 Back Up First, If You Can

If the screen still shows anything at all, get a backup started before doing anything else.

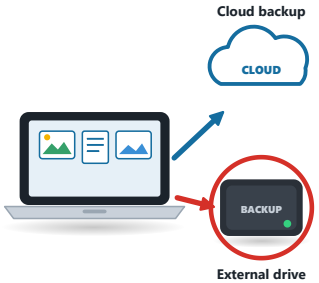

3 Use an External Monitor If It's Dark

A standard, documented feature that lets a laptop with a broken screen display normally.

4 Grab Your Files

Once you can see the screen again, copy what matters to a backup.

5 The Panel Gets Replaced

A screen swap is one of the more common laptop repairs there is.

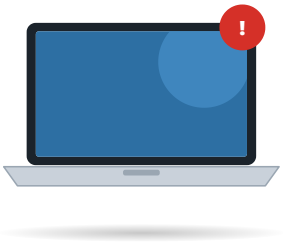

6 The Hinges Get Checked Too

They often take stress in the same impact that cracked the screen.

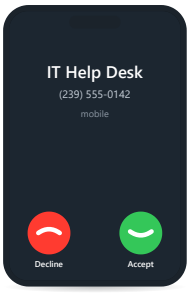

7 Don't Press on the Crack

More pressure can spread the damage, or affect parts that were still fine.

8 Get a Free Diagnostic

A real look confirms it's just the screen before you commit to a repair.

Good to Know

- Close the lid gently, or not at all; a bag or case can put pressure right on the crack.
- A full check means you're not back in a month for something damaged the first time.
- Cracked your laptop screen? Call **239-513-1960** for a free diagnostic.
