Dental & Medical Office Tech Checklist

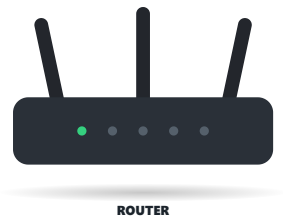

6 things worth checking before they become emergencies.

YOUR TEAM

We Make I.T. Happen!™

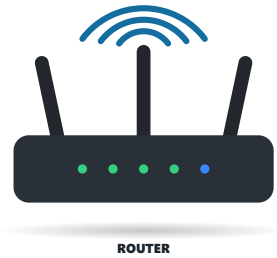

1 Start With the Network

Scheduling and imaging both run on the network; an **outage stops both**.

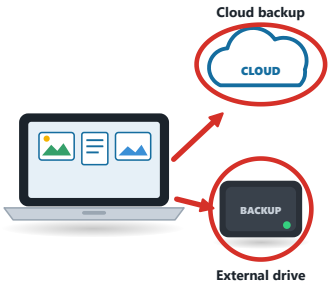

2 Add Automatic Failover

A backup connection keeps a short outage from becoming a **rescheduled afternoon**.

3 Test Your Backups

A backup that's never been restored is a guess, **not a safety net**.

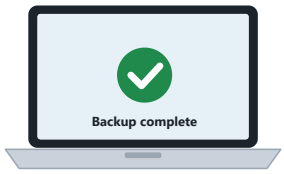

4 HIPAA-Aware Safeguards

Unique logins, encryption, and audit logs: **see our HIPAA Tech Basics guide**.

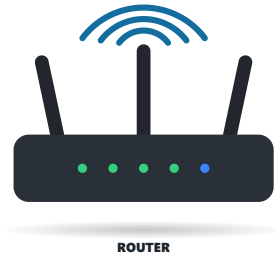

5 Dentrix, Eaglesoft, and More

We support the practice software you already run, **no need to switch**.

6 Wi-Fi in Every Room

Front desk, exam rooms, and imaging stations all need a **strong signal**.

7 Co-Managed or Fully Managed

Works alongside the person you have, **or handles it all**.

8 Put It in Writing

Document what's actually in place, **not just what's planned**.

Good to Know

- This is a starting checklist, not a full HIPAA risk assessment; your compliance officer or attorney can confirm what's specifically required for your practice.
- We support Dentrix, Eaglesoft, and most other practice-management software, so you don't need to switch systems to get help.
- Ready for a review? Call **239-513-1960**.
