Password Managers for Teams

Share access, not the actual password.

We Make I.T. Happen!™

1 Stop Sharing Logins by Text or Sticky Note

Anyone who's ever seen it still has access, even after they leave.

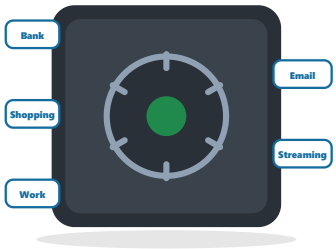

2 Give Everyone Their Own Login

Not one shared master password for the whole team.

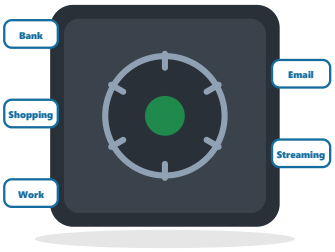

3 Use Shared Vaults or Folders

Like Bitwarden's organizations or 1Password's Teams and Business plans.

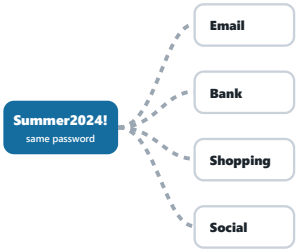

4 No One Has to See the Real Password

A shared login works without ever revealing the actual characters.

5 Change It Once, Update It Everywhere

Updating the real password updates everyone's access automatically.

6 Remove Access in Seconds

An admin turns off one person's access without resetting every password.

7 Pair It With Offboarding

Make it part of your standard checklist, not a separate step someone forgets.

8 Turn On Two-Factor for the Vault

One strong, protected unlock guards everything inside it.

Good to Know

- A personal plan works for one person; a team or business plan is built for shared access.
- Removing access should take seconds, not a round of changing every shared password by hand.
- Want help setting this up for your team? Call **239-513-1960**.
