Repair or Replace?

An honest checklist, before you decide.

We Make I.T. Happen!™

1 Know Slow Doesn't Mean Dying

A buildup of startup programs, a full drive, or one failing part can all look the same from the outside.

2 Look for a Single Failing Part

A failing hard drive, a worn battery, or a cracked screen; usually fixable, often for less than a new computer.

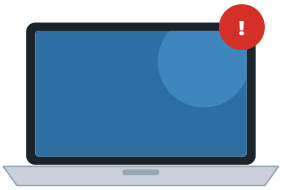

3 Consider How You Use It

A computer that's fine for email and browsing may not be fine for newer software.

4 Watch for Repeated Failures

When the list of what's wrong keeps growing, a new computer usually makes more sense.

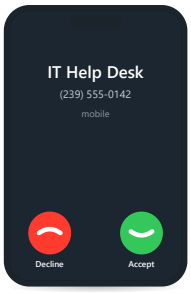

5 Check What It Can Still Run

Software and updates it simply can't run anymore is a real sign it's time to replace.

6 Get a Free Diagnostic First

A real look at what's actually wrong, before you spend anything, so you're deciding with facts.

7 Back Up What Matters Either Way

Worth doing before a repair or a replacement, just in case.

8 Recycle an Old Computer Responsibly

Don't just toss it; donation and recycling options exist for devices that have reached the end.

Good to Know

- Most computer trouble traces back to one part, not the whole machine.
- If it's replaced instead, your files can be moved over to the new one.
- Not sure which way to go? Call **239-513-1960** for a free diagnostic.
